Minimal Entropy: Let $a : \ell_1 \rightarrow \ell_1$ with $a_{jj} \geq 0$. Then

Minimal Entropy: Let $a : \ell_1 \rightarrow \ell_1$ with $a_{ij} \geq 0$. Then

$$S_{\min}(a) = \min_{x \geq 0, \|x\|_1=1} S(a(x)).$$

Theorem 1: $S_{\min}(a \otimes b) = S_{\min}(a) + S_{\min}(b)$.

Minimal Entropy: Let $a : \ell_1 \rightarrow \ell_1$ with $a_{ij} \geq 0$. Then

$$S_{\min}(a) = \min_{x \geq 0, \|x\|_1=1} S(a(x)).$$

Theorem 1: $S_{\min}(a \otimes b) = S_{\min}(a) + S_{\min}(b)$.

Lemma: Let $p \leq q$. Then

$$\|a \otimes b : \ell_p^{nm} \rightarrow \ell_q^{nm}\|_{1 \rightarrow p} = \|a\|_{1 \rightarrow p} \|b\|_{1 \rightarrow p}.$$

Tools: 1) We construct a cp map $\Phi : \mathbb{M}_2 \rightarrow \mathbb{M}_2$ such that

$$f(x) = \text{tr}(\Phi(x^q)^{1/q})$$

is not convex for $1 < q < q_1$.

Remark: f is convex if either the domain or range of Φ is commutative.

Proposition (J.-Xu-2007) Let $q \neq 2$. Then there is no norm $\| \cdot \|$ on the space of selfadjoint sequences such that

$$\left\| \left(\sum_i x_i^q \right)^{1/q} \right\| = \| (x_1, \dots, x_n) \| .$$

Theorem

(J.-Xu-2007) There exists $q_1 > 1$ such that $f(x_1, \dots, x_n) = \text{tr}((\sum_i x_i^q)^{1/q})$ is not convex for $1 < q < q_1$.

Tools: 1) We construct a cp map $\Phi : \mathbb{M}_2 \rightarrow \mathbb{M}_2$ such that

$$f(x) = \text{tr}(\Phi(x^q)^{1/q})$$

is not convex for $1 < q < q_1$.

Remark: f is convex if either the domain or range of Φ is commutative.

2) Matrix valued-version of the central limit theorem.

Proof of Theorem (2):

Since Φ is completely positive,

$$\|\Phi : L_1(\mathbb{M}_n; L_1(\mathbb{M}_m)) \rightarrow L_p(\mathbb{M}_n, L_1(\mathbb{M}_m))\| \leq \|\Phi\|. \quad (7.1)$$

Moreover,

Proof of Theorem (2):

Since Φ is completely positive,

$$\|\Phi : L_1(\mathbb{M}_n; L_1(\mathbb{M}_m)) \rightarrow L_p(\mathbb{M}_n, L_1(\mathbb{M}_m))\| \leq \|\Phi\|. \quad (7.1)$$

Moreover,

$$\begin{aligned} & \|id \otimes T : L_p(\mathbb{M}_n, L_1(\mathbb{M}_m)) \rightarrow L_p(\mathbb{M}_n, L_p(\mathbb{M}_m))\| \\ & \leq \|T\|_{\min(n,m)}, \end{aligned} \quad (7.2)$$

Proof of Theorem (2):

Since Φ is completely positive,

$$\|\Phi : L_1(\mathbb{M}_n; L_1(\mathbb{M}_m)) \rightarrow L_p(\mathbb{M}_n, L_1(\mathbb{M}_m))\| \leq \|\Phi\|. \quad (7.1)$$

Moreover,

$$\begin{aligned} & \|id \otimes T : L_p(\mathbb{M}_n, L_1(\mathbb{M}_m)) \rightarrow L_p(\mathbb{M}_n, L_p(\mathbb{M}_m))\| \\ & \leq \|T\|_{\min(n,m)}, \end{aligned} \quad (7.2)$$

where $\|T : X_1 \rightarrow X_2\|_k = \|id_{\mathbb{M}_k} \otimes T : \mathbb{M}_k(X_1) \rightarrow \mathbb{M}_k(X_2)\|$.

Clearly, $\|T\|_n \leq \|T\|_{cb}$.

Proof of Theorem (2):

Since Φ is completely positive,

$$\|\Phi : L_1(\mathbb{M}_n; L_1(\mathbb{M}_m)) \rightarrow L_p(\mathbb{M}_n, L_1(\mathbb{M}_m))\| \leq \|\Phi\|. \quad (7.1)$$

Moreover,

$$\begin{aligned} & \|id \otimes T : L_p(\mathbb{M}_n, L_1(\mathbb{M}_m)) \rightarrow L_p(\mathbb{M}_n, L_p(\mathbb{M}_m))\| \\ & \leq \|T\|_{\min(n,m)}, \end{aligned} \quad (7.2)$$

where $\|T : X_1 \rightarrow X_2\|_k = \|id_{\mathbb{M}_k} \otimes T : \mathbb{M}_k(X_1) \rightarrow \mathbb{M}_k(X_2)\|$.

Clearly, $\|T\|_n \leq \|T\|_{cb}$. Compose (7.1) and (7.2). ■
