The Projective Rigidity of Projective Space

Michael Eastwood [ joint work with Laurent Stolovitch ]

Australian National University

Workshop on Geometry and Inverse Problems at the Banff International Research Station - p. 1/11

# Blaschke conjecture/theorem On a sphere

- all geodesics are <u>closed</u>
- all geodesics have the same length

The same features are present (in any dimension) on

- real projective space
- complex projective space

Workshop on Geometry and Inverse Problems at the Banff International Research Station – p. 2/11

#### **Blaschke rigidity**

**Deformations** 

- Riemannian  $g_{ab} \longrightarrow \tilde{g}_{ab} = g_{ab} + \epsilon h_{ab}$
- Projective  $\nabla_a \longmapsto \tilde{\nabla}_a = \nabla_a + \epsilon \Gamma_a$

<u>Two-sphere</u> with round metric  $g_{ab}$ 

 $\underline{\mathsf{WLG}} \quad \tilde{g}_{ab} = (1 + \epsilon f)^2 g_{ab}$ 

 $\oint_{\gamma} f = 0 \quad \forall \text{ great circles } \gamma$ 

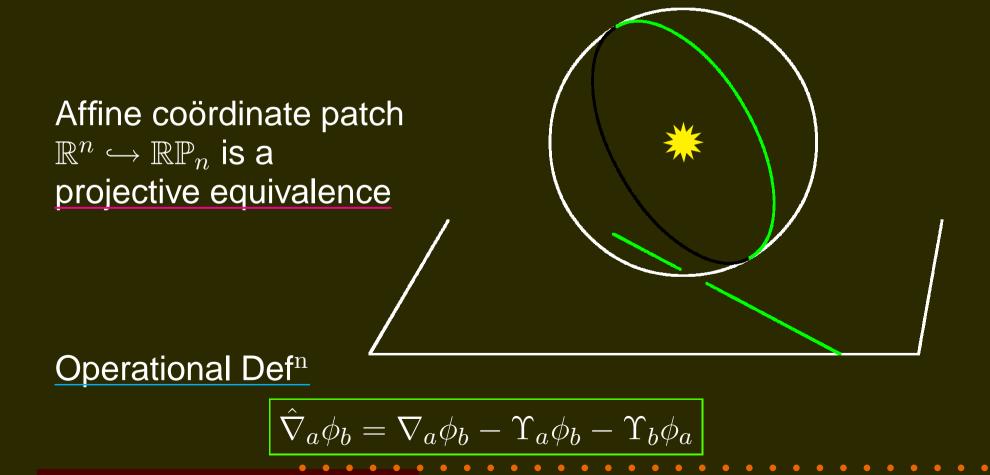

**Funk 1914**  $\oint_{\gamma} f = 0 \ \forall \gamma \iff f \text{ is odd}$  (cf. <u>Radon 1917</u>)

 $\xrightarrow{\longrightarrow} \text{Expect} \begin{cases} S^2 \text{ is Blaschke } \underline{deformable} (\checkmark \text{ Guillemin 1976}) \\ \mathbb{RP}_2 \text{ is Blaschke } \underline{rigid} (\checkmark \dots \text{ LeBrun-Mason 2002}) \end{cases}$ 

Workshop on Geometry and Inverse Problems at the Banff International Research Station - p. 3/11

#### **Projective differential geometry**

<u>Defn</u>  $\hat{\nabla}_a \sim \nabla_a \iff \text{same geodesics}$  (unparameterised) <u>EG</u> (Thales 600 BC) the round sphere is <u>projectively flat</u>

Workshop on Geometry and Inverse Problems at the Banff International Research Station – p. 4/11

#### **Projective deformations**

Projective equivalence

$$\hat{\nabla}_a X^c = \nabla_a X^c + \Gamma_{ab}{}^c X^b$$
 where  $\Gamma_{ab}{}^c = \Upsilon_a \delta_b{}^c + \Upsilon_b \delta_a{}^c$ 

#### **Projective deformation**

 $\tilde{\nabla}_a X^c = \nabla_a X^c + \epsilon \Gamma_{ab}{}^c X^b$  where  $\Gamma_{ab}{}^c = \Gamma_{(ab)}{}^c$  and  $\Gamma_{ab}{}^a = 0$ 

Projective deformation complex on <u> $S^n$  or  $\mathbb{RP}_n$ </u>

$$X^{a} \mapsto (\nabla_{(a} \nabla_{b)} X^{c} + g_{ab} X^{c})_{\circ} \qquad W_{abc}{}^{d} \mapsto \cdots$$
$$\Gamma_{ab}{}^{c} \mapsto (\nabla_{[a} \Gamma_{b]c}{}^{d})_{\circ}$$

(where  $R_{abc}{}^d = g_{ac}\delta_b{}^d - g_{bc}\delta_a{}^d$  (round metric))

Workshop on Geometry and Inverse Problems at the Banff International Research Station - p. 5/11

#### **Riemannian deformations**

Start with the <u>round metric</u>  $R_{abcd} = g_{ac}g_{bd} - g_{bc}g_{ad}$ Recall <u>Riemannian deformation</u>

$$\tilde{g}_{ab} = g_{ab} + \epsilon h_{ab}$$

Riemannian deformation complex on <u> $S^n$  or  $\mathbb{RP}_n$ </u>

 $\begin{array}{cccc} X_a & \mapsto & \nabla_{(a}X_{b)} & & R_{abcd} & \mapsto & \nabla_{[a}R_{bc]de} \\ \hline \mbox{Killing} & h_{ab} & \mapsto & (\nabla_{(a}\nabla_{c)} + g_{ac})h_{bd} & & \\ & - (\nabla_{(b}\nabla_{c)} + g_{bc})h_{ad} & & \\ & - (\nabla_{(a}\nabla_{d)} + g_{ad})h_{bc} & \\ & + (\nabla_{(b}\nabla_{d)} + g_{bd})h_{ac} & & \\ \end{array}$ 

Projectively invariant complex !

SL-irreducible !

#### Homogeneous correspondence

 $\mathbb{RP}_n$ 

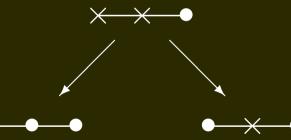

• Homogeneous under action of  $SL(n+1, \mathbb{R})$ 

Hieroglyphics AATA Bus IT &

 $\mathbb{F}_{1,2}(\mathbb{R}^{n+1})$ 

ig 
u

Homogeneous vector bundles

 $\operatorname{Gr}_2(\mathbb{R}^{n+1}) \ni x \rightsquigarrow \gamma = \mu(\nu^{-1}(x))$ 

Workshop on Geometry and Inverse Problems at the Banff International Research Station - p. 7/11

# **Differential Complexes on** $\mathbb{RP}_3$ de Rham

Riemannian deformation

Projective deformation

$$0 \to \underbrace{\overset{1}{\times} \overset{0}{\longrightarrow} \overset{1}{\longrightarrow} \overset{\nabla^2}{\times} \overset{-3}{\longrightarrow} \overset{2}{\times} \overset{1}{\longrightarrow} \overset{\nabla}{\longrightarrow} \overset{-4}{\times} \overset{1}{\longrightarrow} \overset{2}{\longrightarrow} \overset{\nabla^2}{\longrightarrow} \overset{-6}{\times} \overset{1}{\longrightarrow} \overset{0}{\longrightarrow} \overset{0}{\overset{0}{\longrightarrow} \overset{0}{\overset{0}{\longrightarrow} \overset{0}{\overset{0}{\overset{0}{\overset{0}{\overset{0}{\overset{0}$$

Workshop on Geometry and Inverse Problems at the Banff International Research Station - p. 8/11

# 

<u>Theorem</u> (Bailey–E 1997)  $\ker \mathcal{F} = \nabla^{a+1} (\Gamma(\mathbf{RP}_3, \overset{a}{\prec} \overset{b}{\bullet} \overset{c}{\bullet}))$ 

**Examples**  $\xrightarrow{-2}{\times} \stackrel{2}{\bullet} \stackrel{0}{\bullet} \iff$  Metric rigidity  $\xrightarrow{-3}{\times} \stackrel{2}{\bullet} \stackrel{1}{\bullet} \iff$  projective rigidity  $\xrightarrow{-2}{\times} \stackrel{m}{\bullet} \stackrel{0}{\bullet} \iff$  injectivity of  $I_m$  on symmetric solenoidal fields

Workshop on Geometry and Inverse Problems at the Banff International Research Station - p. 9/11

#### Generalised Funk transform on $\mathbb{CP}_n$

<u>Warning</u>  $\geq \neq \geq \neq \geq \qquad \mathbb{CP}_n$  is not projectively flat!  $W_{ab}{}^c{}_d = 2J_{[a}{}^c\omega_{b]d} - 2\omega_{ab}J_d{}^c - \frac{6}{2n-1}\delta_{[a}{}^cg_{b]d}$ 

$$\Gamma(\mathbb{CP}_n, \bigcirc^{m-1}\Lambda^1) \xrightarrow{\nabla} \Gamma(\mathbb{CP}_n, \bigcirc^m \Lambda^1) \ni f \xrightarrow{I_m} \oint_{\gamma} f$$

Theorem (Tsukamoto 1981) $\ker I_2 = \operatorname{range} \nabla$ Theorem (E-Goldschmidt 2013) $\ker I_m = \operatorname{range} \nabla$ 

<u>Technique</u>  $\mathbb{RP}_n \hookrightarrow \mathbb{CP}_n$  is <u>totally geodesic</u> and <u>...</u>

?<u>Theorem</u>? (earlier today)  $\mathbb{CP}_n$  is projectively rigid

Workshop on Geometry and Inverse Problems at the Banff International Research Station - p. 10/11

### THE END

## THANK YOU
