Riemann's zeta-function

Definition (Riemann)

For $\operatorname{Re}(s) > 1$, define the **zeta-function** by

$$\zeta(s):=\sum_{n=1}^{\infty}\frac{1}{n^s}.$$

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

Riemann's zeta-function

Definition (Riemann)

For $\operatorname{Re}(s) > 1$, define the **zeta-function** by

$$\zeta(s):=\sum_{n=1}^{\infty}\frac{1}{n^s}.$$

Theorem (Fundamental Theorem)

The function ζ(s) has an analytic continuation to C (apart from a simple pole at s = 1 with residue 1).

Riemann's zeta-function

Definition (Riemann)

For $\operatorname{Re}(s) > 1$, define the **zeta-function** by

$$\zeta(s):=\sum_{n=1}^{\infty}\frac{1}{n^s}.$$

Theorem (Fundamental Theorem)

- The function ζ(s) has an analytic continuation to C (apart from a simple pole at s = 1 with residue 1).
- **We have the functional equation**

$$\pi^{-\frac{s}{2}}\Gamma\left(\frac{s}{2}\right)\zeta(s) = \pi^{-\frac{(1-s)}{2}} \cdot \Gamma\left(\frac{1-s}{2}\right) \cdot \zeta(1-s).$$

\$1 million prize problem

Conjecture (Riemann)

Apart from the negative evens, the zeros of $\zeta(s)$ satisfy $\operatorname{Re}(s) = \frac{1}{2}$.

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

\$1 million prize problem

Manin's Speculation Based on Numerical Calculations

Manin's Speculation Based on Numerical Calculations

Speculation (Manin)

There is a theory of zeta-polynomials for modular form periods.

Manin's Speculation Based on Numerical Calculations

Speculation (Manin)

There is a theory of zeta-polynomials for modular form periods.

Theorem (Main Theorem)

Manin's Speculation is true.

Fundamental Theorem for modular *L*-functions

Theorem (Hecke, Atkin-Lehner, Shimura, Manin, and others) If $f \in S_k(\Gamma_0(N))$ is a newform, then the following are true:

Fundamental Theorem for modular *L*-functions

Theorem (Hecke, Atkin-Lehner, Shimura, Manin, and others) If $f \in S_k(\Gamma_0(N))$ is a newform, then the following are true:

1 L(f, s) has an analytic continuation to \mathbb{C} .

Fundamental Theorem for modular *L*-functions

Theorem (Hecke, Atkin-Lehner, Shimura, Manin, and others) If $f \in S_k(\Gamma_0(N))$ is a newform, then the following are true:

1 L(f, s) has an analytic continuation to \mathbb{C} .

• If
$$\Lambda(f, s) := \left(\frac{\sqrt{N}}{2\pi}\right)^s \Gamma(s)L(f, s)$$
, then $\exists \epsilon(f) \in \{\pm 1\}$ for which
 $\Lambda(f, s) = \epsilon(f) \cdot \Lambda(f, k - s).$

Fundamental Theorem for modular *L*-functions

Theorem (Hecke, Atkin-Lehner, Shimura, Manin, and others) If $f \in S_k(\Gamma_0(N))$ is a newform, then the following are true:

1 L(f, s) has an analytic continuation to \mathbb{C} .

$$If \Lambda(f,s) := \left(\frac{\sqrt{N}}{2\pi}\right)^s \Gamma(s)L(f,s), \text{ then } \exists \epsilon(f) \in \{\pm 1\} \text{ for which} \\ \Lambda(f,s) = \epsilon(f) \cdot \Lambda(f,k-s).$$

• There are numbers ω_f^{\pm} such that for $1 \le j \le k-1$

$$L(f, \mathbf{j}) \in \overline{\mathbb{Q}} \cdot (2\pi i)^{\mathbf{j}} \cdot \omega_f^{\pm}.$$

Critical Values and Weighted Moments

Definition (Deligne, Manin, Shimura) If $f \in S_k(\Gamma_0(N))$ is a newform, then its **critical** *L*-values are $\{L(f, 1), L(f, 2), L(f, 3), \dots, L(f, k-1)\}.$

Critical Values and Weighted Moments

Definition (Deligne, Manin, Shimura) If $f \in S_k(\Gamma_0(N))$ is a newform, then its **critical** *L*-values are $\{L(f, 1), L(f, 2), L(f, 3), \dots, L(f, k-1)\}.$

Definition (O-Rolen-Sprung)

If $m \ge 1$, then we define the **weighted moments**

$$M_f(m) := \frac{1}{(k-2)!} \sum_{j=0}^{k-2} \binom{k-2}{j} \Lambda(f, j+1) \cdot j^m$$

The zeta-polynomials ($k \ge 4$ even)

The zeta-polynomials ($k \ge 4$ even)

Definition (O-Rolen-Sprung)

The **zeta-polynomial** for f is

$$Z_f(s) := \sum_{h=0}^{k-2} (-s)^h \sum_{m=0}^{k-2-h} {m+h \choose h} \cdot S(k-2,m+h) \cdot M_f(m),$$

The zeta-polynomials ($k \ge 4$ even)

Definition (O-Rolen-Sprung)

The **zeta-polynomial** for f is

$$Z_f(s) := \sum_{h=0}^{k-2} (-s)^h \sum_{m=0}^{k-2-h} {m+h \choose h} \cdot S(k-2,m+h) \cdot M_f(m),$$

where the (signed) Stirling numbers of the first kind are given by

$$(x)_n = x(x-1)(x-2)\cdots(x-n+1) =: \sum_{m=0}^n S(n,m)x^m.$$

Functional Equations and the Riemann Hypothesis

Theorem 1 (O-Rolen-Sprung)

If $f \in S_k(\Gamma_0(N))$ is an even weight $k \ge 4$ newform, then we have:

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

Theorem 1 (O-Rolen-Sprung)

If $f \in S_k(\Gamma_0(N))$ is an even weight $k \ge 4$ newform, then we have: • For all $s \in \mathbb{C}$ we have that $Z_f(s) = \epsilon(f)Z_f(1-s)$.

Theorem 1 (O-Rolen-Sprung)

If $f \in S_k(\Gamma_0(N))$ is an even weight $k \ge 4$ newform, then we have:

- For all $s \in \mathbb{C}$ we have that $Z_f(s) = \epsilon(f)Z_f(1-s)$.
- 2) If $Z_f(\rho) = 0$, then $\operatorname{Re}(\rho) = 1/2$.

Theorem 1 (O-Rolen-Sprung)

If $f \in S_k(\Gamma_0(N))$ is an even weight $k \ge 4$ newform, then we have:

• For all $s \in \mathbb{C}$ we have that $Z_f(s) = \epsilon(f)Z_f(1-s)$.

2) If
$$Z_f(\rho) = 0$$
, then $\operatorname{Re}(\rho) = 1/2$.

Remark

To completely confirm Manin's speculation we must show:

Theorem 1 (O-Rolen-Sprung)

If $f \in S_k(\Gamma_0(N))$ is an even weight $k \ge 4$ newform, then we have:

• For all
$$s \in \mathbb{C}$$
 we have that $Z_f(s) = \epsilon(f)Z_f(1-s)$.

2) If
$$Z_f(\rho) = 0$$
, then $\operatorname{Re}(\rho) = 1/2$.

Remark

To completely confirm Manin's speculation we must show:

• The values $Z_f(-n)$ have a "nice" generating function.

Theorem 1 (O-Rolen-Sprung)

If $f \in S_k(\Gamma_0(N))$ is an even weight $k \ge 4$ newform, then we have:

A Nice Generating Function

Theorem 2 (O-Rolen-Sprung)

Define the normalized period polynomial for f by

$$R_f(z) := \sum_{j=0}^{k-2} \binom{k-2}{j} \cdot \Lambda(f, k-1-j) \cdot z^j$$

A Nice Generating Function

Theorem 2 (O-Rolen-Sprung)

Define the normalized period polynomial for f by

$$R_f(z) := \sum_{j=0}^{k-2} \binom{k-2}{j} \cdot \Lambda(f, k-1-j) \cdot z^j.$$

Then we have that

$$\frac{R_f(z)}{(1-z)^{k-1}} = \sum_{n=0}^{\infty} Z_f(-n) z^n.$$

A Nice Generating Function

Theorem 2 (O-Rolen-Sprung)

Define the normalized period polynomial for f by

$$R_f(z) := \sum_{j=0}^{k-2} \binom{k-2}{j} \cdot \Lambda(f, k-1-j) \cdot z^j.$$

Then we have that

$$\frac{R_f(z)}{(1-z)^{k-1}} = \sum_{n=0}^{\infty} \frac{Z_f(-n)z^n}{n!}.$$

Remark (Euler)

$$\frac{t}{1-e^{-t}} = 1 + \frac{1}{2}t - t\sum_{n=1}^{\infty} \zeta(-n) \cdot \frac{t^n}{n!}.$$

Arithmetic Geometric Information

Conjecture (Bloch-Kato). Let $0 \le j \le k-2$, and assume $L(f, j+1) \ne 0$. Then we have

$$\frac{L(f,j+1)}{(2\pi i)^{j+1}\Omega^{(-1)^{j+1}}} = u_{j+1} \times \frac{\operatorname{Tam}(j+1)\#\operatorname{III}(j+1)}{\#H^0_{\mathbb{Q}}(j+1)\#H^0_{\mathbb{Q}}(k-1-j)} =: C(j+1)$$

Arithmetic Geometric Information

Conjecture (Bloch-Kato). Let $0 \le j \le k-2$, and assume $L(f, j+1) \ne 0$. Then we have

$$\frac{L(f,j+1)}{(2\pi i)^{j+1}\Omega^{(-1)^{j+1}}} = u_{j+1} \times \frac{\operatorname{Tam}(j+1)\#\operatorname{III}(j+1)}{\#H^0_{\mathbb{Q}}(j+1)\#H^0_{\mathbb{Q}}(k-1-j)} =: C(j+1)$$

Corollary (O-Rolen-Sprung)

Assuming the Bloch-Kato Conjecture, we have that

$$M_f(m) = \sum_{0 \le j \le k-2} \widetilde{C(j+1)} j^m.$$

Combinatorial Polynomials $H_k^{\pm}(s)$

Definition (Binomial Coefficient)

If $x, y \in \mathbb{C}$, then the complex **binomial coefficient** $\begin{pmatrix} x \\ y \end{pmatrix}$ is

$$egin{pmatrix} x \ y \end{pmatrix} := rac{\Gamma(x+1)}{\Gamma(y+1)\Gamma(x-y+1)}.$$

Generating Function for Critical Values

Definition

If $f \in S_k(\Gamma_0(N))$ is a newform, then its **period polynomial** is

$$r_f(X) := \sum_{m=0}^{k-2} L(f, k-1-m) \cdot \frac{(2\pi i X)^m}{m!}$$

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

Natural Problems

- **1** Determine the $r_f(X)$.
- **2** Study the "distribution" of the zeros of $r_f(X)$.

Example. $f \in S_4(\Gamma_0(8))$

Let $f(\tau) = q - 4q^3 - 2q^5 + \cdots \in S_4(\Gamma_0(8))$ be the unique newform.

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

Example. $f \in S_4(\Gamma_0(8))$

Let $f(\tau) = q - 4q^3 - 2q^5 + \cdots \in S_4(\Gamma_0(8))$ be the unique newform.

We find numerically that

 $L(f, 1) \approx 0.354500683730965,$ $L(f, 2) \approx 0.690031163123398,$ $L(f, 3) \approx 0.874695377085079.$

Example. $f \in S_4(\Gamma_0(8))$

Let $f(\tau) = q - 4q^3 - 2q^5 + \cdots \in S_4(\Gamma_0(8))$ be the unique newform.

We find numerically that

 $L(f, 1) \approx 0.354500683730965,$ $L(f, 2) \approx 0.690031163123398,$ $L(f, 3) \approx 0.874695377085079.$

O This means that

$$r_f(X) \approx -6.9975X^2 + 4.33559iX + 0.87469$$

Example. $f \in S_4(\Gamma_0(8))$

Let
$$f(\tau) = q - 4q^3 - 2q^5 + \cdots \in S_4(\Gamma_0(8))$$
 be the unique newform.

We find numerically that

 $L(f, 1) \approx 0.354500683730965,$ $L(f, 2) \approx 0.690031163123398,$ $L(f, 3) \approx 0.874695377085079.$

O This means that

$$r_f(X) \approx -6.9975X^2 + 4.33559iX + 0.87469.$$

③ Its roots are $\pm 0.170376720591406 + 0.309793113352311$ *i*,
Example. $f \in S_4(\Gamma_0(8))$

Let
$$f(\tau) = q - 4q^3 - 2q^5 + \cdots \in S_4(\Gamma_0(8))$$
 be the unique newform.

We find numerically that

 $L(f, 1) \approx 0.354500683730965,$ $L(f, 2) \approx 0.690031163123398,$ $L(f, 3) \approx 0.874695377085079.$

2 This means that

$$r_f(X) \approx -6.9975X^2 + 4.33559iX + 0.87469.$$

● Its roots are $\pm 0.170376720591406 + 0.309793113352311i$, which have norm² approximately $0.125000000 \approx \frac{1}{8}$.

"Riemann Hypothesis" for Period Polynomials

"Riemann Hypothesis" for Period Polynomials

Our results on RHPP

Theorem 4 (Jin-Ma-O-Soundararajan)

The Riemann Hypothesis for period polynomials is true.

Corollary (Jin-Ma-O-Soundararajan)

If $f \in S_k(\Gamma_0(N))$ is an even weight $k \ge 4$ newform, then all of the zeros ρ of $R_f(z)$ satisfy $|\rho| = 1$.

Our results on RHPP

Theorem 4 (Jin-Ma-O-Soundararajan)

The Riemann Hypothesis for period polynomials is true.

Corollary (Jin-Ma-O-Soundararajan)

If $f \in S_k(\Gamma_0(N))$ is an even weight $k \ge 4$ newform, then all of the zeros ρ of $R_f(z)$ satisfy $|\rho| = 1$. In particular, Theorems 1 and 2 are true.

Equidistribution

Theorem 5 (Jin-Ma-O-Soundararajan)

For fixed $\Gamma_0(N)$, as $k \to +\infty$, the zeros of $r_f(X) = 0$ become equidistributed on the circle with radius $\frac{1}{\sqrt{N}}$.

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

Equidistribution

Theorem 5 (Jin-Ma-O-Soundararajan)

For fixed $\Gamma_0(N)$, as $k \to +\infty$, the zeros of $r_f(X) = 0$ become equidistributed on the circle with radius $\frac{1}{\sqrt{N}}$.

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

Question

Can one do better than equidistribution?

If either N or k is large enough, then the roots of $r_f(X)$ are:

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

If either N or k is large enough, then the roots of $r_f(X)$ are:

$$X_{\ell} = rac{1}{i\sqrt{N}} \cdot \exp\left(i\theta_{\ell} + O\left(rac{1}{2^k\sqrt{N}}
ight)
ight),$$

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

If either N or k is large enough, then the roots of $r_f(X)$ are:

$$X_{\ell} = rac{1}{i\sqrt{N}} \cdot \exp\left(i\theta_{\ell} + O\left(rac{1}{2^k\sqrt{N}}
ight)
ight),$$

where for $0 \le \ell \le k - 3$ we let $\theta_\ell \in [0, 2\pi)$ be the solution to:

$$\frac{k-2}{2} \cdot \theta_{\ell} - \frac{2\pi}{\sqrt{N}} \sin(\theta_{\ell}) = \begin{cases} \frac{\pi}{2} + \ell \pi & \text{if } \epsilon(f) = 1, \\ \ell \pi & \text{if } \epsilon(f) = -1. \end{cases}$$

If either N or k is large enough, then the roots of $r_f(X)$ are:

$$X_{\ell} = rac{1}{i\sqrt{N}} \cdot \exp\left(i heta_{\ell} + O\left(rac{1}{2^k\sqrt{N}}
ight)
ight),$$

where for $0 \le \ell \le k-3$ we let $\theta_\ell \in [0, 2\pi)$ be the solution to:

$$\frac{k-2}{2} \cdot \theta_{\ell} - \frac{2\pi}{\sqrt{N}} \sin(\theta_{\ell}) = \begin{cases} \frac{\pi}{2} + \ell \pi & \text{if } \epsilon(f) = 1, \\ \ell \pi & \text{if } \epsilon(f) = -1. \end{cases}$$

Remarks (Fix k)

• The angles of the roots of $r_f(X)$ converge as $N \to +\infty$.

If either N or k is large enough, then the roots of $r_f(X)$ are:

$$X_{\ell} = rac{1}{i\sqrt{N}} \cdot \exp\left(i heta_{\ell} + O\left(rac{1}{2^k\sqrt{N}}
ight)
ight),$$

where for $0 \le \ell \le k-3$ we let $\theta_\ell \in [0, 2\pi)$ be the solution to:

$$\frac{k-2}{2} \cdot \theta_{\ell} - \frac{2\pi}{\sqrt{N}} \sin(\theta_{\ell}) = \begin{cases} \frac{\pi}{2} + \ell \pi & \text{if } \epsilon(f) = 1, \\ \ell \pi & \text{if } \epsilon(f) = -1. \end{cases}$$

Remarks (Fix k)

- The angles of the roots of $r_f(X)$ converge as $N \to +\infty$.
- This proves Theorem 3 that for fixed $\epsilon(f) \in \{\pm\}$ we have

$$\lim_{N\to+\infty}\widetilde{Z}_f(s)=\widetilde{H}_k^{\pm}(-s).$$

Proof of RHPP when k = 4

• We care about the zeros of

$$-2L(f,1)\pi^2X^2+2\pi iL(f,2)X+L(f,3)=0.$$

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

Proof of RHPP when k = 4

• We care about the zeros of

$$-2L(f,1)\pi^2X^2 + 2\pi iL(f,2)X + L(f,3) = 0.$$

• By the FE we have

$$L(f,3) = \frac{2\pi^2}{N} \cdot \epsilon(f) \cdot L(f,1).$$

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

Proof of RHPP when k = 4

• We care about the zeros of

$$-2L(f,1)\pi^2X^2+2\pi iL(f,2)X+L(f,3)=0.$$

• By the FE we have

$$L(f,3) = \frac{2\pi^2}{N} \cdot \epsilon(f) \cdot L(f,1).$$

• And so we care about the zeros of

$$X^2 - \frac{iL(f,2)}{\pi L(f,1)} \cdot X - \frac{\epsilon(f)}{N} = 0.$$

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

Proof of RHPP when k = 4

• We care about the zeros of

• By the FE we have

$$L(f,3) = \frac{2\pi^2}{N} \cdot \epsilon(f) \cdot L(f,1).$$

• And so we care about the zeros of

$$X^2 - \frac{iL(f,2)}{\pi L(f,1)} \cdot X - \frac{\epsilon(f)}{N} = 0.$$

• Trivial if L(f, 2) = 0.

(ロ)、

Proof of RHPP when k = 4 cont.

• If $L(f, 2) \neq 0$, then we apply the quadratic formula.

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

• If $L(f, 2) \neq 0$, then we apply the quadratic formula.

• We need to show $\frac{N}{\pi^2}L(f,3)^2 \ge L(f,2)^2$.

- If $L(f, 2) \neq 0$, then we apply the quadratic formula.
- We need to show $\frac{N}{\pi^2}L(f,3)^2 \ge L(f,2)^2$.
- Then we use Hadamard factorization of $\Lambda(f, s)$

$$\Lambda(f,s) = e^{A+Bs} \prod_{\rho} \left(1 - \frac{s}{
ho}\right) \exp(s/
ho).$$

- If $L(f, 2) \neq 0$, then we apply the quadratic formula.
- We need to show $\frac{N}{\pi^2}L(f,3)^2 \ge L(f,2)^2$.
- Then we use Hadamard factorization of $\Lambda(f, s)$

$$\Lambda(f,s) = e^{A+Bs} \prod_{
ho} \left(1 - rac{s}{
ho}
ight) \exp(s/
ho).$$

• Now we always have $3/2 \leq \operatorname{Re}(\rho) \leq 5/2$.

- If $L(f, 2) \neq 0$, then we apply the quadratic formula.
- We need to show $\frac{N}{\pi^2}L(f,3)^2 \ge L(f,2)^2$.
- Then we use Hadamard factorization of $\Lambda(f, s)$

$$\Lambda(f,s) = e^{A+Bs} \prod_{
ho} \left(1 - rac{s}{
ho}
ight) \exp(s/
ho).$$

- Now we always have $3/2 \leq \operatorname{Re}(\rho) \leq 5/2$.
- This means that $\Lambda(f,3) \ge \Lambda(f,2)$.

GENERAL STRATEGY FOR PROVING RHPP

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

Analytic Definition of $r_f(X)$

Lemma

If $f \in S_k(\Gamma_0(N))$ is a newform, then

$$r_f(X) = -\frac{(2\pi i)^{k-1}}{(k-2)!} \cdot \int_0^{i\infty} f(\tau)(\tau - X)^{k-2} d\tau.$$

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 少へ⊙

$\mathrm{PSL}_2(\mathbb{R})^+$ action

Definition If $\phi(z) \in \mathbb{C}[z]$ with $\deg(\phi) \le k - 2$ and $\begin{pmatrix} a & b \\ c & d \end{pmatrix} \in \mathrm{PSL}_2(\mathbb{R})^+$, then $\phi|\begin{pmatrix} a & b \\ c & d \end{pmatrix}(z) := (ad - bc)^{1-\frac{k}{2}} \cdot (cz + d)^{k-2} \cdot \phi\left(\frac{az + b}{cz + d}\right).$

$\mathrm{PSL}_2(\mathbb{R})^+$ action

Definition

If $\phi(z) \in \mathbb{C}[z]$ with deg $(\phi) \leq k-2$ and $\begin{pmatrix} a & b \\ c & d \end{pmatrix} \in \mathrm{PSL}_2(\mathbb{R})^+$, then

$$\phi|\left(\begin{smallmatrix}a&b\\c&d\end{smallmatrix}\right)(z):=(ad-bc)^{1-\frac{k}{2}}\cdot(cz+d)^{k-2}\cdot\phi\left(\frac{az+b}{cz+d}\right)$$

Remark

This defines a "modular action" on

$$V_{k-2} := \{ \phi \in \mathbb{C}[z] : \deg(\phi) \le k-2 \}.$$

Functional Equation for $r_f(X)$

Lemma

If f is a newform, then $p_f(X) := r_f(X/i) \in \mathbb{R}[X]$ satisfies:

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

Functional Equation for $r_f(X)$

Lemma

If f is a newform, then $p_f(X) := r_f(X/i) \in \mathbb{R}[X]$ satisfies:

$$p_f(X) = \pm i^k \left(\sqrt{N}X\right)^{k-2} \cdot p_f\left(\frac{1}{NX}\right).$$

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

Functional Equation for $r_f(X)$

Lemma

If f is a newform, then $p_f(X) := r_f(X/i) \in \mathbb{R}[X]$ satisfies:

$$p_f(X) = \pm i^k \left(\sqrt{N}X\right)^{k-2} \cdot p_f\left(\frac{1}{NX}\right).$$

Proof.

• If $W_N := \begin{pmatrix} 0 & -1 \\ N & 0 \end{pmatrix}$, then Atkin-Lehner implies

$$f|W_N=\pm f.$$

Functional Equation for $r_f(X)$

Lemma

If f is a newform, then $p_f(X) := r_f(X/i) \in \mathbb{R}[X]$ satisfies:

$$p_f(X) = \pm i^k \left(\sqrt{N}X\right)^{k-2} \cdot p_f\left(\frac{1}{NX}\right).$$

Proof.

• If $W_N := \begin{pmatrix} 0 & -1 \\ N & 0 \end{pmatrix}$, then Atkin-Lehner implies

$$f|W_N=\pm f.$$

• Since
$$W^2_N = I$$
 in $\mathrm{PSL}_2(\mathbb{R})^+$
Functional Equation for $r_f(X)$

Lemma

If f is a newform, then $p_f(X) := r_f(X/i) \in \mathbb{R}[X]$ satisfies:

$$p_f(X) = \pm i^k \left(\sqrt{N}X\right)^{k-2} \cdot p_f\left(\frac{1}{NX}\right).$$

Proof.

• If $W_N := \begin{pmatrix} 0 & -1 \\ N & 0 \end{pmatrix}$, then Atkin-Lehner implies

$$f|W_N = \pm f.$$

• Since $W_N^2 = I$ in $\mathrm{PSL}_2(\mathbb{R})^+$, we get

 $r_f|(1\pm W_N)=0.$

General Strategy

• Let
$$m := \frac{k-2}{2}$$
, and define

$$P_f(X) := \frac{1}{2} \binom{2m}{m} \wedge \left(f, \frac{k}{2}\right) + \sum_{j=1}^m \binom{2m}{m+j} \wedge \left(f, \frac{k}{2}+j\right) X^j.$$

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

General Strategy

• Let
$$m := \frac{k-2}{2}$$
, and define
 $P_f(X) := \frac{1}{2} {\binom{2m}{m}} \wedge \left(f, \frac{k}{2}\right) + \sum_{j=1}^m {\binom{2m}{m+j}} \wedge \left(f, \frac{k}{2} + j\right) X^j.$

Provide the state of the unit circle has all of the zeros of

$$T_f(X) := P_f(X) + \epsilon(f) P_f(1/X).$$

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

General Strategy

• Let
$$m := \frac{k-2}{2}$$
, and define

$$P_f(X) := \frac{1}{2} \binom{2m}{m} \wedge \left(f, \frac{k}{2}\right) + \sum_{j=1}^m \binom{2m}{m+j} \wedge \left(f, \frac{k}{2}+j\right) X^j.$$

Theorem 4 follows if the unit circle has all of the zeros of

$$T_f(X) := P_f(X) + \epsilon(f) P_f(1/X).$$

- ロ ト - 4 回 ト - 4 □ - 4

Solution Letting $X \to z = e^{i\theta}$ on |z| = 1, then $T_f(z)$ is a "trigonometric" polynomial in sin or cos depending $\epsilon(f)$.

Classical Theorem of Pólya and Szegö

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

Classical Theorem of Pólya and Szegö

Theorem (Szegö, 1936)

Suppose that $u(\theta)$ and $v(\theta)$ are

$$u(\theta) := a_0 + a_1 \cos(\theta) + a_2 \cos(2\theta) + \dots + a_n \cos(n\theta),$$

$$v(\theta) := a_1 \sin(\theta) + a_2 \sin(2\theta) + \dots + a_n \sin(n\theta).$$

▲□▶ ▲□▶ ▲三▶ ▲三▶ 三三 のへで

Classical Theorem of Pólya and Szegö

Theorem (Szegö, 1936)

Suppose that $u(\theta)$ and $v(\theta)$ are

$$u(\theta) := a_0 + a_1 \cos(\theta) + a_2 \cos(2\theta) + \dots + a_n \cos(n\theta),$$

$$v(\theta) := a_1 \sin(\theta) + a_2 \sin(2\theta) + \dots + a_n \sin(n\theta).$$

If $0 \le a_0 \le a_1 \le a_2 \dots \le a_{n-1} < a_n$, then both u and v have exactly n zeros in $[0, \pi)$, and these zeros are simple.

Useful inequalities

Lemma 1

The completed L-function $\Lambda(f, s)$ satisfies the following: 1) It is monotone increasing in the range $s \ge \frac{k}{2} + \frac{1}{2}$.

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

Useful inequalities

Lemma 1

The completed L-function $\Lambda(f, s)$ satisfies the following: 1) It is **monotone increasing** in the range $s \ge \frac{k}{2} + \frac{1}{2}$. 2) In particular, we have

$$0 \leq \Lambda\left(f, \frac{k}{2}\right) \leq \Lambda\left(f, \frac{k}{2} + 1\right) \leq \Lambda\left(f, \frac{k}{2} + 2\right) \leq \dots$$

Useful inequalities

Lemma 1

The completed L-function $\Lambda(f, s)$ satisfies the following: 1) It is monotone increasing in the range $s \ge \frac{k}{2} + \frac{1}{2}$. 2) In particular, we have

$$0 \leq \Lambda\left(f, \frac{k}{2}\right) \leq \Lambda\left(f, \frac{k}{2} + 1\right) \leq \Lambda\left(f, \frac{k}{2} + 2\right) \leq \dots$$

3) If $\epsilon(f) = -1$, then $\Lambda\left(f, \frac{k}{2}\right) = 0$ and $\Lambda\left(f, \frac{k}{2} + 1\right) \leq \frac{1}{2}\Lambda\left(f, \frac{k}{2} + 2\right) \leq \frac{1}{3}\Lambda\left(f, \frac{k}{2} + 3\right) \leq \dots$

Method of Proof.

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

Method of Proof.

• Use the Hadamard Factorization of $\Lambda(f, s)$

$$\Lambda(f,s) = e^{A+Bs} \prod_{
ho} \left(1 - rac{s}{
ho}\right) \exp(s/
ho).$$

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

Method of Proof.

• Use the Hadamard Factorization of $\Lambda(f, s)$

$$\Lambda(f,s) = e^{A+Bs} \prod_{
ho} \left(1 - rac{s}{
ho}\right) \exp(s/
ho).$$

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

• All the zeros lie in $\left|\operatorname{Re}(s) - \frac{k}{2}\right| < \frac{1}{2}$.

Method of Proof.

• Use the Hadamard Factorization of $\Lambda(f, s)$

$$\Lambda(f,s) = e^{A+Bs} \prod_{
ho} \left(1 - rac{s}{
ho}\right) \exp(s/
ho).$$

(日) (日) (日) (日) (日) (日) (日) (日)

- All the zeros lie in $\left|\operatorname{Re}(s) \frac{k}{2}\right| < \frac{1}{2}$.
- Therefore $|1 s/\rho|$ is increasing for $s \ge \frac{k}{2} + \frac{1}{2}$. \Box

Zeta-polynomials for modular form periods

Executive Summary

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

Theorem (O-Rolen-Sprung) Manin's Conjecture is true.

Theorem (O-Rolen-Sprung)

Manin's Conjecture is true.

• Each zeta-polynomial $Z_f(s)$ has a FE and obeys RH.

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

Our results

Theorem (O-Rolen-Sprung)

Manin's Conjecture is true.

1 Each zeta-polynomial $Z_f(s)$ has a FE and obeys RH.

2 The $Z_f(-n)$ encode the "Bloch-Kato complex."

Our results

Theorem (O-Rolen-Sprung)

Manin's Conjecture is true.

- **1** Each zeta-polynomial $Z_f(s)$ has a FE and obeys RH.
- **2** The $Z_f(-n)$ encode the "Bloch-Kato complex."
- The generating function for $Z_f(-n)$ is nice.

Our results

Theorem (O-Rolen-Sprung) Manin's Conjecture is true.

- **1** Each zeta-polynomial $Z_f(s)$ has a FE and obeys RH.
- 2 The $Z_f(-n)$ encode the "Bloch-Kato complex."
- The generating function for $Z_f(-n)$ is nice.
- For fixed k and $\epsilon(f) = \epsilon$, we have

$$\lim_{N\to+\infty}\widetilde{Z}_f(s)=\widetilde{H}^\epsilon_k(-s).$$

Executive Summary

Theorem 4 (Jin-Ma-O-Soundararajan)

The Riemann Hypothesis for period polynomials is true.

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

Executive Summary

Theorem 4 (Jin-Ma-O-Soundararajan)

The Riemann Hypothesis for period polynomials is true.

Theorem 5 (Jin-Ma-O-Soundararajan)

For fixed $\Gamma_0(N)$, as $k \to +\infty$, the zeros of $r_f(X) = 0$ become equidistributed on the circle with radius $\frac{1}{\sqrt{N}}$.
